

CAPABILITIES BRIEF

Identity Governance

Did you know...?

- It has been reported that 48 percent of data security breaches were caused by insiders? Failure to secure user access when employees change or leave roles can lead to expensive security breaches
- Current and emerging government regulations outline the technical accountability issues with which organisations must comply
- Industry standards also require more fine-grained control of the activities and accesses of users
- The trends toward data centre consolidation, outsourcing, cloud computing and virtualization are increasing the overall number of threat vectors

Your organisation at risk

Most organisations invest in security solutions to keep the “bad guys” out but it is equally important to manage the in-house risk.

Does your organisation have proven technologies and a layer of security intelligence to help ensure that the correct people have access to the correct assets at the correct time?

Does your organisation meet the latest security compliance and government regulatory guidelines?

If you answered “No” to either of the questions above, contact your Decipher Works representative and ask about undertaking an organisational Security Review. This is the next step to securing your enterprise.

Decipher Works can assist you in implementing an IAM framework incorporating people, process and technology.

Solution capabilities

- Business-friendly Access Certifications and Reviews
- Automated Policy Enforcement
- Audit Reporting and Analytics
- Self-Service Access Request
- Automated Provisioning
- Integrated Password Management
- 3rd Party Integrations

Solution overview

- Controls user access and enforce business policies
- Manages requests, approvals and revalidation of users and their entitlements
- Automates password management and tracks usage of identities

Solution benefits

- Mitigate risk of inappropriate access
- Streamlines administration of identities to reduce risk and ensure compliance
- Helps reduce administration costs, strengthen security and improve productivity
- Automates processes that improve productivity while strengthening security
- Improve audit performance

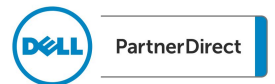

Working with Decipher Works

Decipher Works is a Cybersecurity Specialist in Identity, Access, Governance & Federation. Working with some of Australia & New Zealand's largest organisations within the financial, telecommunication, transportation and utilities sectors. Decipher Works secures critical resources within organization and facilitates users access to the most important productivity tools whilst enforcing strong security.

The Decipher Works team includes experienced software engineers who have worked directly on the development of core IAM products, and are some of the country's most experienced solutions and technology developers and configuration specialists.

As a reliable and committed identity and access management business partner, Decipher Works provides high-calibre services via its client-focused, structured and collaborative approach. Our consultants have a proven track record in the successful implementation of security, identity and access management systems, plus complementary application integration and software development services.

Decipher Works draws on its strong industry experience to design, deliver and manage customised IT solutions aligned to our clients' business goals. We provide best of breed solutions leveraging leading market technologies.
